

Resalat Empowering Philanthropists NGO

Non-profit Organization

This organization deeply believes in the power of assistive technologies to include individuals with disabilities in society. It knows that ATs are not just tools, but bridges that remove barriers and enable access to education, employment, communication, and social life. Its focus is on the best and newest technologies to ensure that individuals have efficient and up-to-date tools to reach their maximum potential.

Accurate and Precise Services

Identification and Assessment of Needs: Research and Data Collection: The charity can identify the real needs of people with disabilities in various regions through field research and data collection. This process includes examining the type and severity of disability, the level of need for assistive technologies, and the current access status to these technologies.

Collaboration with Specialists: Engaging with specialists from various fields such as occupational therapy, physiotherapy, and biomedical engineering can help with accurately assessing the needs of individuals and selecting the most appropriate technologies.

Education and Empowerment: Conducting Educational Workshops: In-person and online training for people with disabilities, their families, and caregivers on the proper use of assistive technologies is essential. Raising Public Awareness: Through campaigns and events, the community can be made aware of the importance of assistive technologies and their impact on improving the quality of life for people with disabilities. Specialized Training: Offering specialized courses for individuals like teachers and doctors in selecting and applying assistive technologies can improve services.

Funding and Distribution of Assistive Technologies: Fundraising: Charitable organizations can launch fundraising campaigns to gather the necessary resources for purchasing and distributing assistive technologies such as hearing aids, electric wheelchairs, and special communication devices. Direct Donations and Financial Assistance: Purchasing and directly donating assistive equipment to those in need and providing low-interest loans or financial aid for purchasing expensive equipment can increase access to these technologies. Establishing Equipment Banks: Creating centers for collecting and repairing used assistive equipment and re-donating them to those in need can also be effective.

Development and Localization of Technology: Support for Innovation: Supporting startups and researchers in developing local and affordable assistive technologies can help expand access to these technologies. Collaboration with Manufacturers: Engaging with companies producing assistive technologies to create versions that are more affordable and tailored to local needs is of great importance.

Establishing Reference and Consultation Centers:
Setting up Service Centers: Establishing centers where people with disabilities can go for consultation, equipment testing, and receiving training can help enhance service levels.
Technical Support Services: Providing repair and maintenance services for assistive technologies is essential due to the ongoing need for post-sale support.

Advocacy and Promotion: Policy Change: Engaging with governmental bodies and legislators to enact laws and regulations that facilitate access to assistive technologies, such as insurance coverage and reduction of import tariffs, is of particular importance. Removing Barriers: Efforts to eliminate physical and social barriers that prevent effective use of assistive technologies are another aspect of the charity activities.

**“A brighter future for everyone,
powered by innovation”**

**At the Resalat Empowering Philanthropists
NGO, we believe in the unparalleled power
of assistive technologies. We are not just
looking for temporary aid; we are seeking
sustainable and intelligent solutions that
transform the lives of individuals with
disabilities.**

**By supporting our innovative and forward-
thinking approach, you are essentially
investing in the self-sufficiency and
independence of hundreds
of people . Using the latest tools and
knowledge, we build bridges so that
individuals can access education,
employment, and full participation in
society."**
